

Briggs & Stratton Petrol Engines - E10 Fuel

Briggs & Stratton overhead-valve and side-valve engines can both use up to, and including, 10% ethanol petrol.

Always use clean, fresh, unleaded petrol with an octane rating of at least 77 for side-valve engines or at least 85 for overhead-valve engines. We recommend the use of Briggs & Stratton Fuel Fit petrol stabiliser, Order No. 992380 (100 ml) or 992381, (250 ml) to keep fuel fresh for up to 3 years. When using E10-95 petrol, the dosage should be increased by 25%.

Buy fuel in quantities that can be used within 30 days. This will ensure that the fuel is always fresh and that the volatility of the fuel matches the season. Do not mix petrol with oil.

NOTE: We recommend NOT using petrol containing more than 10% ethanol (E10) blend and this MUST be removed from the engine before storage. Methanol-containing petrol must also NOT be used.

Please also refer to the engine operating instructions for more information or visit:
